

ColourMaster Configuration Tools

Create a multiplicity of changing colour scenes.

'ColourMaster' software configuration tools.

Features:

16 + million colours to choose from.

Create stunning light shows.

Programming is fun with endless results

Bespoke software and hardware written and built to your needs.

It can be incorporated into many existing installations.

Developed by Select Software, 'ColourMaster' is a simple-to-use system driven by a powerful brain, a controller packed with specially-written software that makes this the most powerful and flexible system of its kind in the world.

Use simple effects such as fades and strobes to create stunning light shows.

Colours can be programmed to change randomly or at specified times to a chosen pattern.

Transitions between shades are smooth and elegant.

Programmes are updated quickly and easily.

Boring lighting has been banished.

In its place is 'LightMaster' LED – the computer-controlled colour-changing system that can seamlessly deliver more than 16 million smooth colours using low-voltage technology.
