

'LightMaster' LED Colour Changing

'LightMaster' LED Strip with 'ColourMaster' Configuration Tools.

Colour sequences (above) with 'ColourMaster' Configuration Tools. Configuring LM8000D (below) with LightMaster Configuration Tools.

Features:

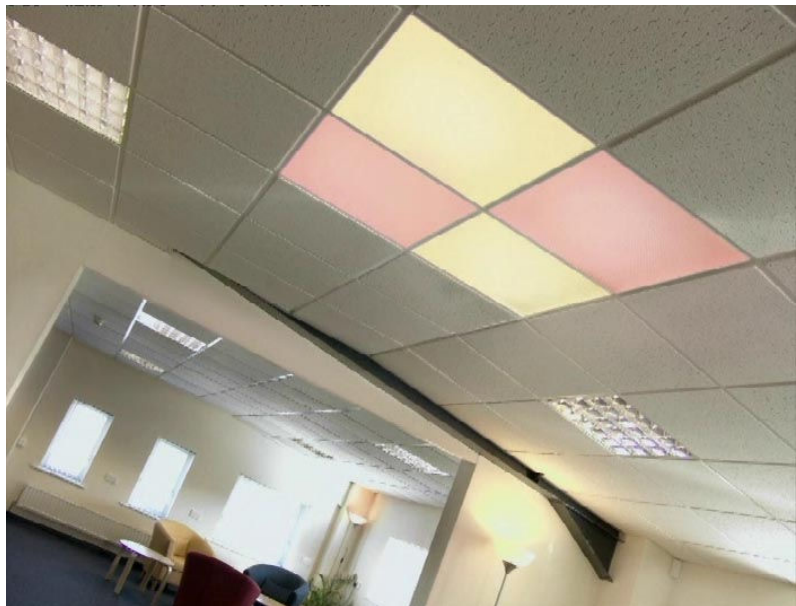

Create any colour effect required with RGB Strips

Move and Dim sequences for lighting effects.

Programme colour with our 'ColourMaster' Configuration Tools.

Animate lighting with our LightMaster configuration tools.

Precise lighting activation with "Rugby" time clocks.

Installed individually or in combination, they can create some of the most stunning lighting effects you've ever seen, both internally and externally.

Boring lighting has been banished. In its place is 'LightMaster' LED — the computer-controlled colour-changing system that can seamlessly deliver more than 16 million colours using low-voltage technology.

It will transform the work of designers, architects and signmakers everywhere.

A range of potential uses as broad as your imagination.

Outstanding architectural effects. Atmospheric ceiling and wall panels. Startling, ever-changing signage.

Colours can be programmed using our 'ColourMaster' Configuration tools to change randomly or at specific times to a chosen pattern.
