Fun Land - Holland

Monarch Amusements - Bognor Regis

Reel Time - London

Software and Electronic Development

# 'LightMaster' Total Imagination

LightMaster's plug-and-play simplicity makes it ideal for design professionals looking to create lighting installations with real impact.

Displays can feature solid colours or a whole range of shifting shades, programmed to change at the flick of a switch or even according to the time of day or night.

Fading - flicker free - from one colour to any other colour in the palette can be slow and sensuous or fast and furious, demonstrating the power of LED technology and elegant software working together . . . beautifully.

'LightMaster' LED . . . 'LightMaster' Controllers . . .

They are at the heart of one of the most startling and versatile lighting systems you'll see anywhere. For 'LightMaster' is the light fantastic:

*To create a mood...*

*To enhance a style...*

*To add the ultimate in pizzazz!*
